Elektrochemisches Kombient in manufacturing Igelit Crescl are exported to it is exported to determine the design of the second of

- Varnish 3,000 tons; of this amount 1,000 to 1,200 tons is processed into Iso-Perlon-Lack.
- 10. The production of carbonyl iron dust is still under development; it is urgently needed by the high frequency industry. The cost is 34 DEF for one kilogram; the planned yearly production is 50 tons.
- 11. The 1953 production program alloted to the Leuns works is 30,000 tons of ammonium sulphate for barter transactions. This material is to be used for procuring tubes, heavy and thin plate as well as "V2A" materials and electric motors. The contracting party is the Stemmler-Imex firm; business is conducted through its representative Finger (fnu), Frankfurt/Hain. The domestic market price for ammonium sulphate is 504 DME a ton; the export price is 350 DME a ton less than the domestic price.
- 12. 60 technical experts of the Leuna works were forced to work in Russia; of these, at least 50 percent have returned again to East Germany. It is reported that the following persons are still in Russia:

Dr. Gericke

oil expert

Dr. Loewenberg

expert of synthetic production

Dr. Asinger

heavy water specialist

Heroldt .

professor; it is reported that he has died.

13. Group leader Huetter (fnu) is employed in the State Secretariat for Chemistry; he belongs to no political party.
